

## 4 Trans Dunnage Airbag

The optimal solution for load securement and void fill in multiple modes of transportation.

4 Trans by Cargo Tuff is an independently certified dunnage bag designed for side to side cargo securement and void filler applications in truck, container, rail and ocean transport.

As with all Cargo Tuff dunnage bags, we start with a virgin resin and then extrude, weave and laminate our fabric in house before manufacturing the bags under the highest quality standards in our industry. Each bag is fitted with our standard spring-loaded filling valve which allows for rapid inflation and deflation.

Our complete extensive line of inflation tools is compatible with these bags, making installation easy.

4 Trans is internationally certified for 4 modes of transportation.

### Technical Specifications

- Outer Material – Woven Polypropylene
- Weight -57gr/m<sup>2</sup> + 15gr/m<sup>2</sup> Lamination
- Inner Material – Co-Extruded Polyethylene
- Weight 55 micron
- Max. Operating Pressure – 2 PSI
- Burst Pressure – 6 PSI
- Reusable spring-loaded valve
- Inflation time – Varies based on bag size, void size and air supply

### Sizes

- 36x36, 36x48, 36x72, 36x84, 48x48, 48x72, 48x84, 48x96

### Printing

- 4Trans Printing

### Bag Color

- White

-  Sustainable
-  Recyclable
-  Independently Certified
