

B-52 Dunnage Air Bag

Void Filler

Because we extrude and weave our own fabric, we have the ability to make dunnage bags in virtually any width. Our B-52 is 52" wide, giving the bag that extra expansion needed to fill a larger void up to 30" wide.

This is especially useful on single pallet applications.

It can be used as a great alternative to drop-down, corrugated void filler. Less expensive, lower freight costs per unit and does not take up as much space on the warehouse floor.

These bags can be inflated in the void or outside the void and pushed into position.

Technical Specifications

- Outer Material -Woven Polypropylene
- Weight -65gr/m² + 18gr/m² Lamination
- Inner Material -Co-Extruded Polyethylene
- Weight 72 micron
- Max. Operating Pressure -2.6 PSI
- Burst Pressure -8PSI
- Reusable spring-loaded valve
- Inflation time -Varies based on void size and air supply

- Sustainable
- Recyclable
- Rail Verified
